***Detailed Action***

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows: Page 6, Para. 0020, line 6 "slots 260" to --slots 250--.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Michael N. Spink (Tel. 734-302-6000) on 5/4/06.

***Drawings***

1. The drawings are objected to because #144 is not shown. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top

margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Allowable Subject Matter***

2. Claims 1-31 are allowed.

The following is an examiner's statement of reasons for allowance: The allowability resides in the overall structure of the apparatus as recited in independent claim 1 and at least in part, because claim 1 recite integrated vehicle structure including "an electronic site", "a flexible substrate", "electronic components", "a plastic support structure" including "a plurality of elongated ribs" and "a plurality of air passageways". The allowability resides in the overall structure of the apparatus as recited in independent claim 22, and at least in part, because claim 22 recite integrated vehicle structure including "an electronic site", "a flexible substrate", "electronic components", "a metal support structure", "a plastic support structure" including "a plurality of elongated ribs" and "the flexible substrate being mounted to both the plastic mounting surface and the and metal mounting surface".

The aforementioned limitations in combination with all remaining limitations of the respective claims are believed to render said independent claims 1 and 22 and all claims dependent therefrom patentable over art of record.

3. The closest references to the present invention are believed to be as follows: Woodman et al. teaches (WO 03/063300) an electronic site having a substrate with

Art Unit: 2835

electronic components mounted thereon on a plastic support structure with a plurality of ribs, but fails to disclose a metal support structure and a plurality of air flow passageways defined by adjacent ribs.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Takiguchi et al. (US 5,856,908) discloses a flexible substrate mounted on a support structure. Glovatsky et al. (US 6,669,273) discloses a metal or plastic support structure for an electronic site having a substrate with electronic components mounted thereon. Jairazbhoy et al. (US 5,669,813), Glovatsky et al. (US 5,706,170) and Allison et al. (US 5,979,540) disclose using an air passageway to provide air flow on a substrate with electronic components mounted thereon on a cross car structure. Sinkunas et al. (US 5,715,140) discloses a flexible substrate with electronic components mounted for heat dissipation on an air passageway on a cross car structure. Baker et al. (US 7,000,969) discloses a cross car structure for electronic components. Carpenter et al. (US 4,750,087) teaches air passageways formed by adjacent ribs in a support structure

None of the cited references, either taken alone or in combination is believed to render the present invention unpatentable as claimed.
